

Executive Order (EO) on Improving the Nation's Cybersecurity

The Executive Order (EO) on Improving the Nation's Cybersecurity was signed in May and is now in the process of being implemented. The EO is broad ranging in scope, focusing on key areas of vulnerability, including:

- Removing barriers to threat information sharing between government and the private sector
- Modernizing and implementing stronger cybersecurity standards in the federal government
- Improving software supply chain security
- Establishing a cybersecurity safety review board
- Creating a standard playbook for responding to cyber incidents
- Improving detection of cybersecurity incidents on federal government networks
- Improving investigative and remediation capabilities

The principal aim of the EO is to enhance the cybersecurity of government departments and supply chains. However, expect this to have a trickle-down impact on all types of businesses within the private sector, both big and small.

Therefore, small businesses should make themselves aware of the requirements of the EO and determine if they are required to make any changes to remain in compliance, specifically with regards to their vendor relationships.

The Importance of DIB Small Business Cybersecurity

Krystal Covey Director, DCISE 2 Mar 22

UNCLASSIFIED

- Value of Small Businesses
- The threat is real
 - Highlights
 - Ransomware
 - Nation states
- So what? (Impacts)
- How compromises happen

- What does prevention look like? What should you do?
- DCISE's role
- Resources

- DIB Small Business Ecosystem
- Oct 21: SECDEF Memo- DoD Small Business Contracting
 - Critically important to DoD mission success
 - Dynamic, innovative, & resilient small business industrial base
- Jan 22: SECAF Memo
 - Critical resource for national defense; high priority focus
 - Accelerated tech, innovation, adaptability, agility, affordability

- Threats to Small Businesses
 - DIB & supply chain networks provide access and insight
- What can happen to your networks/data?
 - Compromise → escalated permissions → unautho access (PII/PHI/CUI) → IP theft → foothold to compromise other key players in supply chain → ex
- Why are SB targets?
 - Easier; compromise and leverage to exploit larger companies
 - Less mature in CS
 - Therefore cheaper for the adversary
- Being a target & getting compromised should not be taboo
 - 2 types of companies
 - Emphasis is on Cyber Resilience: ability to recover

https://www.cisa.gov/stopransomware

2 Jul 21 - Supply chain ransomware attack discovered

- Vulnerability in Virtual System Administrator (VSA) software as a service
- Over 50 managed services providers (MSPs) impacted
 - 800 1500 downstream businesses impacted
- 13 Jul 21 Sodinokibi website went offline
- 22 Jul 21 Kaseya acquired universal decryption key
- DCISE pushed this info to Partners before it made it into media cycles

https://www.zdnet.com/article/updated-kaseya-ransomware-attack-faq-what-we-knownow/

- CISA MS-ISAC Guide
 - Maintain offline backups of data
 - Develop incident response plans
 - Institute cybersecurity training
 - Regularly update anti-virus and antimalware software
 - Employ authentication protocols
- 21 Sep 21 US Treasury Department's Office of Foreign Assets Control issued updated advisory
 - Emphasis on cooperation with law enforcement as a significant mitigating factor

1 Nov 21 - FBI Private Industry Notification

"The FBI does not encourage paying a ransom to criminal actors. Paying a ransom may embolden adversaries to target additional organizations, encourage other criminal actors to engage in the distribution of ransomware, and/or fund illicit activities."

CY21 DoJ Indictments

- North Korea: Three Military Hackers Indicted in Sony & WannaCry Incidents (17 Feb 21)
- Latvia: National Charged for Alleged Role in Transnational Cybercrime Organization "Trickbot" (4 Jun 21)
- Ukraine: Arrested and Charged with Ransomware Attack on Kaseya (REvil) (8 Nov 21)
- Iran: Two Nationals Charged for Cyber-Enabled Disinformation and Threat Campaign Designed to Influence the 2020 U.S. Presidential Election (18 Nov 21)

- Why does it matter that the adversary is targeting you?
- What do the adversaries do with the data that they access on your networks?
- "My company is so small, there is no way that we are a target."
- A small business survey from CNBC and Momentive shows majority (56%) of America's small business owners are not worried about being the victim of a cyberattack

https://www.cnbc.com/2021/08/10/main-street-overconfidence-small-businesses-dont-worry-about-hacking.html

- "60% of Small Companies close within 6 months of being hacked"
 - Recovery costs can be anywhere from thousands to millions, depending upon the scope/scale of incident
- Emphasis on Cyber Resilience, not being impenetrable
 - Achievable goals

https://cybersecurityventures.com/60-percent-of-small-companies-close-within-6-months-of-being-hacked/

F-35	Specifications	Shenyang J-31
51.4 ft (15.7 m)	Length	56 ft 9 in
35 ft	Wingspan	37 ft 9 in
14.4 ft	Height	15 ft 9 in
69.9K lbs	Max takeoff weight	61.7K lbs
1200 Mph	Max cruise speed	1242 Mph
1726 Miles	Range	2485 Miles
19.9K lbs	Max payload	17.6K lbs

- Adversaries gain access to systems in many different ways
 - Example: through a user visiting a website over the normal course of browsing. With this technique, the user's web browser is typically targeted for exploitation, but adversaries may also use compromised websites for non-exploitation behavior such as acquiring Application Access Token.
 - Example: Adversaries can use compromised email accounts to further their operations, such as leveraging them to conduct Phishing for Information or Phishing
 - Utilizing an existing persona with a compromised email account may engender a level of trust in a potential victim if they have a relationship, or knowledge of, the compromised persona. Compromised email accounts can also be used in the acquisition of infrastructure (ex: <u>Domains</u>)
- They can purchase domains used during targeting
 - Domain names are the human readable names used to represent one or more IP addresses. They can be purchased or, in some cases, acquired for free.

- Adversaries may encrypt data on target systems or large numbers of systems in a network to interrupt availability to system and network resources
 - They can attempt to render stored data inaccessible by encrypting files or data on local and remote drives and withholding access to a decryption key
 - This may be done in order to extract monetary compensation from a victim in exchange for decryption or a decryption key (ransomware) or to render data permanently inaccessible in cases where the key is not saved or transmitted. In the case of ransomware, it is typical that common user files like Office documents, PDFs, images, videos, audio, text, and source code files will be encrypted. In some cases, adversaries may encrypt critical system files, disk partitions, and the MBR.
- Adversaries may hijack domains and/or subdomains that can be used during targeting
 - Domain registration hijacking is the act of changing the registration of a domain name without the permission of the original registrant
 - An adversary may gain access to an email account for the person listed as the owner of the domain. The adversary can then claim that they forgot their password in order to make changes to the domain registration. Other possibilities include social engineering a domain registration help desk to gain access to an account or taking advantage of renewal process gaps.

■ On 1 Oct 21, DCISE began officially using the **MITRE ATT&CK** Framework to denote reported event/incident TTPs to meet a growing awareness and use throughout the DIB and US Govt organizations

2021 DCISE Identified ATT&CK TTPs*

- Is it about prevention? Or about resilience?
- Good cybersecurity hygiene contributing to resilience
 - CIO Top 10 from Town Halls
 - DFARS 252.204-7012
 - NIST SP 800.171
 - CMMC

One team, one voice delivering global acquisition insight.

Ensuring a company can defend itself against cyberattacks starts by implementing essential cybersecurity practices

1) Keep up-to-date architecture diagrams with inventories of all hardware and software to be able to respond to threats quickly.

2) Patch and configure security settings on all devices and software.

3) Employ active defenses for known attack vectors and stay ahead of attackers with the latest intelligence and response actions.

4) Monitor network and device activity logs and look for anomalous behaviors.

5) Employ multi-factor authentication because username and passwords are easily hacked.

6) Employ email and browser defenses and prevention for two of the most prevalent attack vectors.

7) Employ malware protection on the networks.

8) Encrypt data at rest and in transit.

9) Train staff to avoid and respond to suspicious events.

10) Have contingency plans and exercise them. Employ backup and recovery, alternative services, emergency response/notification and other similar processes to ensure the organization can successfully respond to a cyber event.

- DCISE promotes collaborative information sharing and delivers DIB-focused Cybersecurity services and resources. DCISE is the DoD conduit for DIB cyber incidents, leveraging 14+ years of subject matter expertise to inform the USG of Cybersecurity threats and trends impacting the DIB.
